Construction	0,7 – 1,0 kg / 10 m ²
Maintenance	
Spring	0,7 – 1,0 kg / 10 m ²
Summer / Autumn	0,4 – 0,6 kg / 10 m ²

APPLICATION PERIOD

Fertilize your lawn at least twice a year for best results.

Product recommendations are informational only and do not lead to a commitment or agreement. Directions for use are based on practical experience and research. Each plant and cultivation system has its own fertilizer requirements. Legal (fertilizer) standards are also important in determining the dose. It is advisable (good practice) to test new applications on a small scale in advance each time. Fertilizers cause an EC increase and can affect pH. It is essential to take all these factors into account when using a fertilizer product or combining different fertilizers. Ecotop accepts no liability for consequential damages when using its products.
